What Can Be Donated?

Organ Donation

One organ donor can save up to eight lives with their donation. The organs that can be donated include the heart, lungs, liver, kidneys, pancreas, & small intestine.

Eye Donation

One eye donor can give the gift of sight to two people. When someone needs a corneal transplant, a person's cornea is replaced with corneal tissue from an eye donor.

Tissue Donation

One tissue donor can provide healing for up to 75 lives. The tissues that can be donated include such as skin, bone, tendons, veins, and heart valves.
